

Delta II

There's no mistaking
a good thing

AESTHETICS

Unquestionably attractive

Created with colour engineering for a natural appearance:

A dark green and olive green surface combined with a straw brown and deep green thatch.

Delta features **Natural look**® technology to deflect light and give the grass a realistic, natural appearance. This technology offers a superior natural appearance whatever the lighting conditions and the angle from which you look at the garden.

A 35 mm pile gives it a proud, arrogant appearance. These natural looking colours have a superior appearance that you are sure to adore.

RECOVERY

When it's good it's good

The midrib structure and pile support the fibres, giving Delta the ability to spring back fast. The blades of stay upright for a superior result.

SENSATIONS

Even if you don't take care of it

Delta is exceptionally so soft it feels just like walking on a manicured lawn. Your garden will give feel great even if you don't take care of it.

GUARANTEES

Our commitment: three written guarantees

1 We guarantee that **Delta II** will keep its colour for at least nine years, but that's not because we have some kind of magic potion. It is because we have done research and selected the best fibres for the products we manufacture. We manufacture with high performance raw materials that withstand the effects of UVA light. What's more, if you follow the maintenance instructions your grass will stay in tip-top conditions for even longer.

2 We guarantee that **Delta II** by Albergrass has been classed as Efl-s1 in fire-retardant tests for fire resistant flooring according to UNE EN 13501-12007. What does that mean? It means that the grass you are buying has passed rigorous fire-retardant tests to ensure that it is safe and offers excellent protection.

3 We guarantee that our products are Made in Spain. The demanding Spanish Certificate of Origin proves it.

Albergrass is the first company in this sector to obtain the distinctive OECS: Spanish Origin Certificate. This label certifies the Spanish origin of the Albergrass **Delta II** lawn. To achieve this seal of approval OECS conducts a thorough audit to ensure that the production process is carried out in Spain.

One way to check the quality of the lawn is looking at the finish, the back. That's where everything is united, and so it is important not to bend and jump requebraje. Only a quality latex, such as that used Albergrass allows that everything is connected with high strength and flexibility without cracking or breaking.

Albergrass a brand new garden every morning
