

Tempo

Designed for terraces,
courtyards and balconies

AESTHETICS

Specially designed for terraces and balconies

Tempo has a height of 22 mm, 13,800 decitex and 48,000 stitches. And what does that mean? Well, it is a very dense, comfortable and soft type of grass. As we know that you sometimes love to go out on your terrace barefoot, we made it really comfortable.

Its aesthetic four-colour design offers an unbeatable natural appearance to the terrace's most common viewing angles, which are generally different to those of a lawn.

RECOVERY

Technological design to provide urban spaces with natural aesthetics

Tempo has a height of 22 mm and a very dense appearance. The combination of limited height along with the density of the fibres makes it recover very well from treading.

Which is why it is the result of a technological design optimized for frequently used and constantly treaded spaces. Thus, Tempo guarantees the best performance on terraces and balconies. If you would like your terrace to start looking like a lawn, there is no better grass than Albergrass' Tempo.

SENSATIONS

To look at, step on and touch

Tempo is a type of grass manufactured in Spain by Albergrass that stands out for its comfort when stepped on and its softness to the touch. So, the terrace is an ideal place to go out on, even barefoot.

GUARANTEES

Our commitment: three written guarantees

1 We guarantee that **Tempo** will keep its colour for at least eight years, but that's not because we have some kind of magic potion. It is because we have done research and selected the best fibres for the products we manufacture. We manufacture with high performance raw materials that withstand the effects of UVA light. What's more, if you follow the maintenance instructions your grass will stay in tip-top conditions for even longer.

2 We guarantee that **Tempo** by Albergrass has been classed as Cfl-s1 in fire-retardant tests for fire resistant flooring according to UNE EN 13501-12007. What does that mean? It means that the grass you are buying has passed rigorous fire-retardant tests to ensure that it is safe and offers excellent protection.

3 We guarantee that our products are Made in Spain. The demanding Spanish Certificate of Origin proves it.

Albergrass is the first company in this sector to obtain the distinctive OEC: Spanish Origin Certificate. This label certifies the Spanish origin of the Albergrass **Tempo** lawn. To achieve this seal of approval OEC conducts a thorough audit to ensure that the production process is carried out in Spain.

One way to check the quality of the lawn is looking at the finish, the back. That's where everything is united, and so it is important not to bend and jump requebraje. Only a quality latex, such as that used Albergrass allows that everything is connected with high strength and flexibility without cracking or breaking.
